EDUCATION

University POLITEHNICA of Bucharest **B.E. in Computer Science and Engineering**

Important Coursework: Web Programming, Algorithms, Programming Languages, Data Structures, Numerical Methods, OOP, Assembly Programming, Communication Protocols, Local Networks, Parallel Algorithms, Game Development, Electronics

Active member in the Students' League; took part in the organization of numerous projects and events. GPA: 9.75/10

"Ion C. Brătianu" National College

Mathematical Informatics

m Sep. 2014 - June 2018

Pitesti, Romania

GPA: 9.41/10

SKILLS

Angular / Typescript, Python, Linux C/C++, MongoDB, Docker, Java, Networking ● ● ● ● ● JavaScript, Assembly

EXPERIENCES

RD Engineer at Keysight Technologies Fullstack Development - Angular, Python, Docker, Linux

Sept 2021 - Present

♀ Bucharest, Romania

Software Engineer Intern at Keysight Fullstack Development - Angular, AWS, MongoDB

m June 2021 - Sept 2021

♥ Bucharest, Romania

CoFounder at Agro Future Django, Python, Linode

USO - Undergraduate Teaching Assistent Introduction to Operating Systems at ACS@UPB

Coursework Assignments and labs.

ACHIEVEMENTS

- Founded a Tech StartUp for Agriculture with 3 colleagues.
- 1st place at HackITall 1 (BCR section) Hackathon in 2021.
- 3rd place at HackITall 1 (BCR section) Hackathon in 2020.

HONORS & AWARDS

- "Best Business Potential" award by Carrefour Romania at Innovation Labs Demo Day 2020 for AgroFuture StartUp.
- "Silver Medal: National Olympiad in IT (2015)"
- "1st Place: Regional Olympiad in IT (2015)"

PROJECTS

Keysight Technologies - IoT Security Assessment - Fullstack Development

- Developed a mechanism to rerun a whole security assessment / only failed audits from an assessment
- Implemented 5 GHz WiFi System configuration - the user can scan from UI the WiFi APs and select a specific one.
- Developed a framework to fetch live data from a fuzzing process and display them in the
- Integrated a port scanner audit into the product, with custom parameters support: IP address spoofing, rate, specific ports and exclude IP / network.
- Developed great debugging skills and found a race condition that stucked the assessment.
- Offered system hardware management in Web Application (WiFi / Bluetooth dongles)
- Implemented custom parameters for security

Keysight Technologies - Internal Dashboard Angular, AWS Serverless and MongoDB

- During my internship, I developed an internal dashboard for Keysight Technologies, using Angular and AWS Serverless.
- I've done parallel queryes to MongoDB to improve performance, using REST APi
- I used Python for AWS Serverless backend and Angular Framework for frontend.

AgroFuture - Planification and Analytics Django Framework

- We developed, as a team, a planification app for Carrefour agricultural cooperative from Varasti.
- Orders registration, assigning orders to the farmers and a "searching for orders" system.
- We implemented an **Analytics** system for better prediction
